

Strata Software

Strata Software is a specialist in business requirements and software specification. We provide services and solutions to improve the definition, quality and management of requirements and specifications, increasing productivity and reducing delivery risk throughout the application development and integration lifecycle. The success of our approach means that we can also provide software specification as an outsourced service.

Strata solutions include a library of processes, techniques, training and tools that can be applied off-the-shelf or tailored to fit customer needs. Our content is then complemented with practical hands-on implementation support and mentoring.

We partner with leading application lifecycle tools companies to ensure our solutions dovetail with the latest technologies and automation support.

Customers

Our customers include Specsavers, HBOS (Lloyds Banking Group), HSBC, Carnival Group, Allianz and House of Fraser. We also provide services to the systems integrators that serve them.

Assignments have ranged from simple, customised business analysis training, through targeted process improvement projects to international implementations of process and tooling.

HOUSE OF FRASER

“Strata Software provided invaluable assistance to us. We are now identifying around 45% of total defects before physical design resulting in a reduction in project costs of around 12%.”

*John Cantley
Senior Project Manager,
Process Improvement,
Corporate IT, HBOS plc*

“We wanted a solution that was based on experience not just theory.... It was proven, based on best practice, and readily open to customisation.”

*Peter Robinson
Business Analyst Manager,
Specsavers*
